HEATING & AIR CONDITIONING

AccuLink makes your life easier and worry-free.

What if you could make your life a little bit easier when it comes to your home's heating and cooling system? Just imagine if you could adjust or check the temperature in your home even if you were thousands of miles away. What if you knew immediately if your home was too humid or your garage door was open? What if you didn't have to remember when to change the air filter in your furnace?

With the American Standard Heating and Air Conditioning AccuLink system, you can rest assured that you'll have the most comfortable home for you and your family – with all the features you need and all the convenience you want. AccuLink connects components of your air conditioning and heating system, while also providing you with remote telephone access to your system, any time of the day from anywhere in the world.

You can already enjoy the ultimate in comfort with American Standard's systems that are built to perform and built to last.

With AccuLink, you and your family now have the ultimate peace of mind. No worries. No hassles. You can relax knowing that your home's comfort is taken care of for you.

AccuLink delivers built-in convenience.

The AccuLink communicating system works behind the scenes for you. The technology is built into specific American Standard products, allowing them to "communicate" with each other. These interfaces allow components in your air conditioning and heating system to be automatically and properly charged, configured and calibrated – not just during installation but throughout the life of your investment. With the efficiency and effectiveness of the system maintained at a high level, you get the sustained reliability and peak performance you expect from American Standard.

Complete comfort, complete systems.

To enjoy the benefits of American Standard AccuLink, you need a complete heating and air conditioning system – one that's perfectly matched and designed for how and where you live. A complete system connected by AccuLink is made up of these parts:

Outdoor Unit

With American Standard's Allegiance® 18 air conditioner or Heritage® 18 heat pump for your outdoor unit, you'll get energy efficiency and comfort year after year. These Energy Star® qualified products have among the highest efficiency ratings in the industry to help you reduce your home energy usage by up to 56 percent.

In addition, these units have improved humidity control for greater comfort. And, with a new technology called Charge Assist™, they are accurately and automatically charged during installation for greater efficiency and enhanced reliability. For your further peace of mind, these units require fewer wire connections from the outdoor unit to the indoor components of the system. Fewer wires means the system is quicker to install and less invasive to your home.

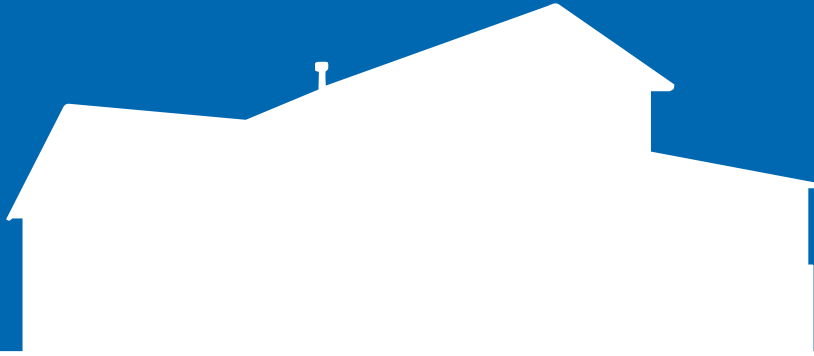

Indoor Unit

Depending on where you live and your individual comfort needs, your independent American Standard dealer can help you choose from a three-stage variable-speed furnace or variable-speed air handler. Both work perfectly with the outdoor unit to ensure you enjoy the same level of comfort in every room of your home.

Our Freedom® 95 furnace – the first three-stage model in the industry – allows you to save energy and money while warming your home. In addition, the three-stage heating reduces temperature swings in your home.

The variable-speed air handler also keeps the temperature even from room to room and helps remove unwanted humidity from the air, leaving you feeling more comfortable year round.

Comfort Control

Throw out your old notions about that thermostat on your wall and what it does for your home. Our new 900 Series Comfort Control sets a new standard by linking all the components in your system, while allowing you to program your preferred settings based on your comfort needs. Think of it as your home's very own personalized communications control center.

The interactive backlit touch-screen is easy to read and use, and it's quiet – no clicking noise when it turns on and off. You'll also get humidification and dehumidification controls to ensure that your home is at the right temperature and comfort level, no matter what the weather is like outside. And in winter conditions, the system provides humidity control that prevents any frost buildup on your home's windows by automatically adjusting for colder outside temperatures.

Telephone Access Module (TAM)

Through the Telephone Access Module (TAM), you can access and control your heating and air conditioning system no matter if you're home or away. It's ideal for second homes, frequent travelers and busy families. With TAM – which is as easy to operate as a voice mail system – you can use your phone to monitor your system by adjusting temperatures when you're away from home, changing the system mode (on, off or auto), or checking the outdoor temperature, just to name a few features.

In addition, you or your service technician can receive proactive alerts based on your comfort preferences or if the system identifies any issues. For instance, you can choose to be alerted if the indoor temperature gets too warm or too cold, or if the humidity is too high or low. By receiving these alerts, for example, you can remotely re-adjust the temperatures so your home is perfectly comfortable when you walk in the front door. An optional auxiliary sensor can even warn you if your garage door is open or if one of your in-home alarm systems goes off. With these pre-programmed and automatic alerts, you can spend more time enjoying your family and less time worrying about your home.

AccuLink connects everything that's important to you.

No matter what the weather is outside – hot and humid or cold and rainy – with an American Standard heating and air conditioning system, you and your family will feel perfectly comfortable inside. Our systems are not only designed to deliver the utmost in comfort to meet the demands of the most active families, they are efficient and economical to operate. Now, with AccuLink technology, you can get the most out of your system – comfort, convenience and peace of mind.

Comfort

The air you feel and the air you breathe are important factors in your home's comfort level. Your comfort is assured with AccuLink and your matched American Standard system. Through your Comfort Control, remote telephone access, and an indoor and outdoor unit that are connected for ultimate efficiency, you have seamless, consistent comfort from room to room. You also have better control of air quality throughout the home and a comfier environment with year-round humidity and temperature control. For even greater comfort and cleaner indoor air for your family, you can add the American Standard AccuClean™ whole-home air filtration system to your furnace or air handler. AccuClean removes up to 99.98 percent of the allergens from the filtered air your family breathes, including dust, dander, pollen, and bacteria.

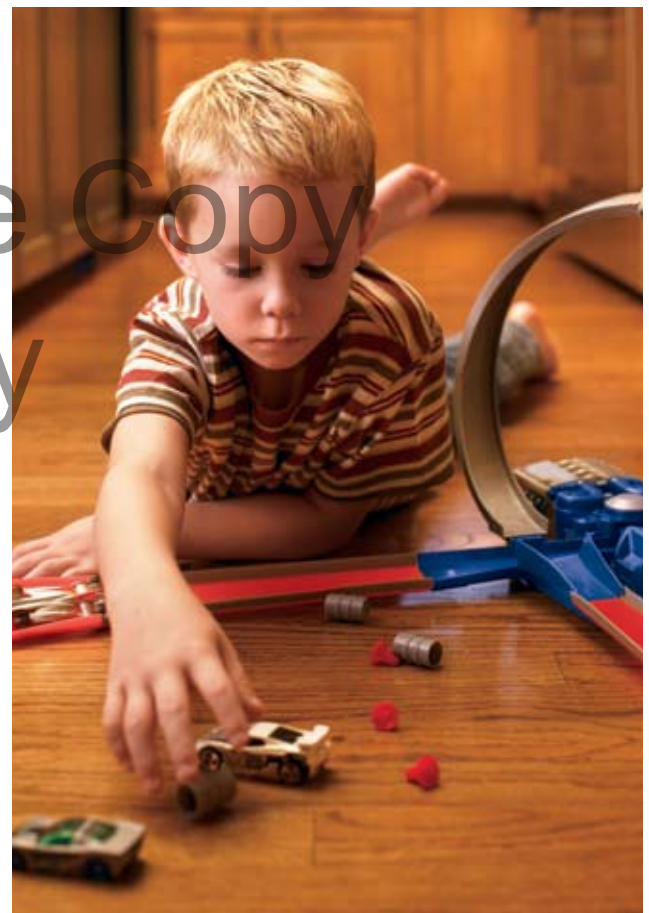

Convenience

The AccuLink communicating system offers great convenience with faster, less intrusive installation and easy ways to adjust your home's comfort levels – or the option to let the system do it for you. Either way, you have better control over your own comfort while at home or away. When you're at home, you can use one central component – the American Standard 900 Series Comfort Control – to program your system for your family's comfort needs. When you're away, a simple phone call allows you to check or reprogram any comfort levels.

Peace of Mind

When it comes to your heating and air conditioning system, everything is taken care of for you thanks to AccuLink. You shouldn't have to spend your time worrying about or adjusting your home's temperature and comfort levels. The Telephone Access Module automatically calls to alert you to any system issues, and you can also monitor and adjust your system when you're not home. Components of your American Standard AccuLink matched home comfort system are automatically and properly charged, configured and calibrated to deliver the highest possible performance and energy efficiency. Rest easy. American Standard AccuLink is working for you and your family.

American Standard dealers also give you peace of mind.

American Standard believes that selecting a new home comfort system should be straightforward and stress-free. Your independent American Standard dealer is a highly trained professional who will work with you every step of the way in choosing the system that's right for your family and your home. Your dealer will conduct an in-depth analysis of your home, discuss your comfort needs, and explain our products in terms that are easy to understand. Based on this information, your dealer will recommend a matched system that works best for you. Plus, American Standard's interest-free financing options make relaxing in the comfort of a new heating and cooling system simple and budget-friendly. When it comes to your comfort, you should expect nothing less than the best. And, that's what independent American Standard dealers aim to deliver.

American Standard

HEATING & AIR CONDITIONING

americanstandardair.com

A fixture in American homes for over 100 years.

Since 1881, families have trusted American Standard Heating and Air Conditioning to make products that stand for quality and performance, while delivering the utmost in home comfort. From the very beginning, we were pioneers in developing clean and affordable heating for the home, with steam boilers and cast iron radiators to help families feel more comfortable. Today, we're just as committed to developing clean and comfortable cooling and heating systems as we were a century ago. With a complete line of home comfort systems, American Standard continues its tradition of helping families feel comfortable and breathe easier in their homes.
